.1 When the facilities furnished under this tariff are used in common with local telephone company services, it is necessary in order to prevent excessive noise and cross talk, that the power of the signal applied to the local lines be limited. A single valued limit for all application cannot be specified. Therefore, the power of the signal in the band over 300 hertz which may be applied by the Customer-provided equipment at the point of termination will be specified by the Company for each application, to be consistent with the signal power allowed on the telecommunications network as specified in FCC Part 68 Rules and Regulations.

.2 To protect the telecommunications services from interference at frequencies which are above the band of service provided, the carrier will specify the acceptable signal power in the following bands to be applied by the Customer provided equipment or communications system at the point of termination to insure that the input to facilities of the Company or other communications company that the company connects with does not exceed the limits indicated.

a. The power in the band from 3,995 hertz to 4,000 hertz shall be at least 19 dB below the power of the signal as specified in Subsection .1 preceding.

b. The power in the band from 4,000 hertz to 10,000 hertz shall not exceed 24 dB below one miliwatt.

3.9.2 Subject to the Company's right to cancel or suspend services as otherwise provided in this tariff, the minimum service period is 30 days. Termination by Customer is effective 30 days after receipt by the company of a written notice of cancellation. 3. GENERAL RULES AND REGULATIONS (Cont'd)

3.9 DETERMINATION AND RENDERING OF CHARGES (Cont'd)

3.9.8 The applicable usage rates for the billing of a distance sensitive call will depend on the distance in airline mileage between the originating and terminating points of the call. For the purpose of determining the airline mileage of a call, the Company will utilize the vertical ("V") and horizontal ("H") coordinates of the rate centers of the originating and terminating points of the call. For purposes of billing, the Company references "V" and "H" coordinates provided by Bell Communications Research. Calls originated by dialing a local exchange number or a 950-type number using an authorization code, the originating point will be the rate center in which the switched access facilities are located. For calls originated via equal access connections, WATS access lines or dedicated access lines, the originating point will be the rate center in which the Customer is located. The terminating point will be determined by the rate center of the called number.

The formula to determine airline miles is as follows:

$$\sqrt{\frac{(V1-V2)^2 + (H1-H2)^2}{10}}$$

3.9.9 Rate periods apply, unless noted otherwise, as indicated below and are based on the time in which a call is established.
